

CONTACTLESS PRODUCTS IN PUBLIC BATHROOM DESIGN

The design of public bathrooms will change totally with the event of Covid 19. Consumers will expect contactless bathrooms and this will become a highly important factor for both hygiene and safety in hospitality, commercial offices and public washrooms.

Various studies have shown that we touch our faces over 2,000 times a day. This simple gesture opens the door to microorganisms entering our bodies. Along with hand hygiene as an effective preventive measure, the ability of avoiding the touching of items that may be cross contaminated is another safety method to protect both ourselves and others.

We have a wide range of contactless products with touch free solutions that avoid contact with the hands available at [TileStyle](https://www.tilestyle.ie).

Electronic Sensor Taps

Infra-red will be the norm with both soap and antibacterial gel dispensers in conjunction with infrared flushing systems for both toilets and urinals.

Infra-red taps can be both wall mounted or deck mounted and battery operated or mains powered. The wall mounted option allows free cleaning of the basin surface. Eco-friendly options with flow limiters are also available. Square and round deckmounted taps feature a double water inlet with hot and cold supplies. They also have flow limiter options to care for the environment. For commercial applications it is recommended that a TMV is fitted to control hot water temperature.

WC & Urinal Infra Red Flush Mechanism

A hygienic alternative to the conventional concealed flush mechanism cistern, this innovative water saving infra-red 6 litre flushing cistern comes complete with an infra-red sensor, solenoid and inlet valve. It is activated by passing your hand in front of the sensor. Ideal in high use areas where hygiene is paramount it can be battery operated or mains operated.

High Speed Optical Hand Dryers

This high-speed energy efficient hand dryer is optical sensor operated. A modern design, it sports a high-quality cover and a bright finish. It features low noise emission, double electrical insulation and no grounding wire is required. It includes a standard filter for dust and particulate and is antivandal. Recommended for spaces of reduced dimensions and high people traffic, it is highly durable and easy to maintain.

Mirrors

Mirrors are available with sensor on/off controls. They also feature defogging heat pads to avoid condensation and perimeter led lighting.
